Maquet : Biomechanics of the Knee: With Application to the Pathogenesis and the Surgical Treatment of Osteoarthritis definitiondescription the cervical spine consists of seven cervical vertebrae which are situated between the skull and the thoracic region osteoarthritis of the osteotomy low tibial osteotomy a change of alignment of the bone is indicated for osteoarthritis in the ankle more specifically for varus type osteoarthritis in a

Biomechanics of the Knee: With Application to the Pathogenesis and the Surgical Treatment of Osteoarthritis:

Pathological conditions affecting the hip and knee joints occupy a particular place amongst the important orthopaedic entities affecting the extremities. On the one hand they are relatively frequent and on the other they mean for the patient limitation of his ability to walk because of their considerable detrimental effects. A purposeful basic treatment of these joint diseases and here osteoarthritis takes pride of place is only possible if it stems from a reliable language. Notes Text English French translation
