This book presents state of the art knowledge on new techniques and materials that can improve functional and

aesthetic results in wound healing while reducing invasiveness based on the author's extensive personal experience. The aim is to equip the practitioner with all the information required in order to select a strategy that will accelerate wound healing and minimize both the risk of complications and scar formation after the wound has fully healed. The opening chapter "The author wishes to offer a novel approach to wound healing that will minimize risk and optimize the benefits" General or plastic surgeons who wish to learn more about the difficult task of healing complicated wounds will find value in this book.
